The Psychology Of Survey Response
The Psychology Of Survey Response
To help reach a wide audience, study links posted here are also publicized via Twitter and an RSS feed (a combined subscriber base of over 241,000 people). All told, SPN has posted links to 2,524 studies and generated a total of 1,451,471 visits to these studies (an average of 217 visits per study for links posted in the past month).

Online Social Psychology Studies
How you design a survey or a form will affect the answers you get. This includes the language you use, the order of the questions, and of course the default values and ranges you use. This article will focus on response scales. This could be in a survey (1-5 vs 1-10 scale, etc) or on a dropdown menu ...

Survey Design 101: Choosing Survey Response Scales
The response formats used in surveys vary depending on the type of question being asked. Responses can be as simple as a choice between “Yes” or “No” or as complex as choosing an answer among seven response options.

Survey Response Scales - Research, Experiments, Psychology ...
Social psychology is the scientific study of how people’s thoughts, feelings and behaviors are influenced by the actual, imagined or implied presence of others. In this definition, scientific refers to the empirical investigation using the scientific method. The terms thoughts, feelings and behavior refer to psychological variables that can be measured in humans.

Types of probability samples: Many strategies can be used to create a probability sample. Each starts with a sampling frame, which can be thought of as a list of all elements in the population of interest (e.g., names of individuals, telephone numbers, house addresses, census tracts). The sampling frame operationally defines the target population from which the sample is drawn and to which the ...

1. Introduction. The production of food requires many resources, such as energy, water and land, and is responsible for a significant portion of the greenhouse gas (GHG) emissions that are caused by households (Tukker and Jansen, 2006, UNEP, 2010). When food is not consumed but discarded, this results in more GHG emissions, more use of resources and a greater change in biodiversity than is ...
